

ABSTRACT OF THE DISCLOSURE

An adhesive strip (10) for suspension is made of flexible material and comprises a base plate (11), at least one fin (12) formed on the base plate (11) and an adhesive layer coated on one side of the base plate (11). The adhesive strip (10) can be easily divided into pieces and attached to flat surfaces or objects respectively, wherein the fins (12) of two paired adhesive strips (12) face in opposite directions and are complementary when engaged with each other. Whereby, the objects are suspended on the surface at a desired place and easily removed if the objects are wanted.
